Gonal-F? RFF 75 IU Vials

What is Gonal-F? RFF?

Gonal-F? RFF (Revised Formulation Female) is a follicle stimulating hormone (FSH), one of the hormones that stimulates the ovary to make mature eggs. Gonal-F? RFF is used to stimulate the development of multiple follicles in women undergoing assisted reproductive technology treatments(ART). This medication may also be used to induce ovulation in women for certain types of ovulation problems.

How Do I Use Gonal-F? RFF?

Here are step-by-step instructions for taking Gonal-F? RFF (follitropin alfa) injections:

Gonal-F? RFF is injected subcutaneously-or into the fatty tissue under your skin. The primary sites for injection are your abdomen - 2 inches on either side of the navel, and your upper, outer-thigh where the skin is loose. Wash your hands thoroughly and make sure that the surface you work on is clean.

Using your thumb, flip off the plastic cap of the Gonal-F? RFF vial

Wipe the top of the vial with an alcohol swab.

Hold the barrel of the prefilled syringe of sterile water in one hand. firmly hold the plastic cap between the thumb and forefinger of the other hand and with a back and forth motion, gently snap and pull off the cap. If the grey cap remains, simply remove it.

Remove the safety seal cover of the 18 G 1 1/2" needle. Push the needle on the prefilled syringe until it is tightened. Holding the hub, or base, of the needle, secure the needle on the tip of the prefilled syringe and remove the needle cap.

With the vial of Gonal F RFF powder on a flat surface, insert the needle of the prefilled syringe straight down through the marked center circle of the rubber stopper. Slowly inject the water into the vial by depressing the syringe plunger. Swirl the mixture gently until it becomes clear. DO NOT shake.

Invert the vial and pull back the 18 G 1 1/2" needle as far as needed and withdraw the entire contents of the vial. Remove the syringe from the vial.

If your dose requires more than one vial of GONal F RFF 75 IU, use the mixture in the syringe to reconstitute the next vial of powder. Use the same 18 G 1 1/2 needle and syringe to reconstitute additional vials.

Gently pull the plunger back to allow a small air space. Recap the needle. Twist and pull off the needle from the syringe and discard in your sharps container.

Remove the safety seal cover of the 27 G 1/2" needle for injection. Push the needle on the prefilled syringe until it is tightened. Holding the hub, or base, of the needle, secure the needle on the tip of the prefilled syringe and remove the needle cap.

With the syringe pointing upward, gently tap on the syringe and slowly push the plunger until all air bubbles are gone and a drop of liquid appears on the tip of the needle.

Recap the needle. The administration syringe is now ready. Use immediately.
